

Crimping Dies

TorqTek Hexagon Crimp Dies

Three die series - Matched to the tool, marked with the size

The die forms the hexagon, so the die, not the tool, decides the shape of the finished crimp. Dies are supplied as matched pairs, stamped with the conductor size, and are specific to the series of tool they are designed for. Series dies are not interchangeable.

A Slide-In Dies

10.0 to 630.0mm²

Circular dies that drop into the head of the hydraulic and battery tools. Fifteen sizes cover the full range to 630mm².

TORQHEX-A-

10	16	25	35	50	70	95	120	150
185	240	300	400	500	630

B Twin-Cavity Dies

10.0 to 150.0mm²

Two cavities in one die, so five dies cover nine conductor sizes. Fit the die with the size you need facing the barrel.

TORQHEX-B-

10/120	16/95	25/70	35/50	150
--------	-------	-------	-------	-----

FITS RHT-51

C Flat Dies

10.0 to 150.0mm²

Rectangular upper and lower halves with location pin for the compact hand hydraulic tools. Nine sizes, both halves stamped.

TORQHEX-C-

10	16	25	35	50	70	95	120	150
----	----	----	----	----	----	----	-----	-----

NO DIES NEEDED

The RM120 indent tool has a die-free head, and the CRIMP5 series ratchet tools have fixed profile jaws — nothing to order, fit or lose.

ORDERING

One code is one matched pair: TORQHEX-A-95 is a 95mm² pair for a series A tool. Check the size stamped on both halves before fitting, and keep pairs together - a mismatched pair will not form a complete crimp.
